SOCIAL & LABOR CONVERGENCE

SLCP PROCESS:

Data Collection
Facility completes data collection as self or joint-assessment.

Data Verification
Facility selects Verifier Body and the Verifier completes the verification.

Data Hosting & Sharing
Facility reviews data and chooses who to share the verified assessment report with via the Gateway & Accredited Hosts.

What is SLCP?

The Social & Labor Convergence Program provides the tools to capture accurate data about working conditions in global supply chains. This multi-stakeholder initiative replaces the need for repetitive social audits by facilitating data sharing.

The Benefits of SLCP!

SLCP tackles audit fatigue by reducing the time and money spent on social and labor audits:

▶ One verified assessment per year that contains enough data to satisfy a wide range of customers.

▶ Overtime SLCP verified assessment data will replace all other audit systems.

▶ Your facility will only need one verification per year (instead of multiple audits).
